## PLANTING INSTRUCTIONS.

Set trees of all kinds the same depth they stood in the nursery. Use sharp knife to prune off all extra long and bruised roots. Have hole just wide enough to accommodate all roots without cramping. In digging holes keep clay and top soil separate. Fill in with good top soil. Keep roots well spread as this is very important, especially with all citrus trees. Pack well from the start. Fertilizer should only be applied to the spring and summer plantings, worked into the soil 18 in. to 2 ft. from the tree.

Owari Satsuma Orange  
Duncan Grapefruit

When remittance comes with order we will pay all transportation charges on citrus trees at prices quoted below.

The most important thing about any tree is a good root system. All our pecan and citrus stock is on four and five year roots. Trees have been well cared for and are as good as can be grown. Citrus all on Trifoliata stock which will stand zero temperature without injury.

Plant pecans 50x50ft. Plant citrus on Trifoliata stock 18 to 25 ft each way.

Gentlemen;

We would like to get some information in  
reference to coloring oranges on the trees.  
If you have any bulletins or literature of any kind  
on the subject would be glad to get it.

Very Truly Yours,

Johnson Nurseries.
